Preview Invitation from DynaScan Technology Corp.

With the advent of digital video, electronic display becomes an active component of nearly every public environment, and will play an essential role for video advertising in the future.

Strong in R&D, DynaScan Technology Corp. positioned itself as an innovative manufacturer in LED display technology and brings 360-degree true color LED display in the market. The DynaScan, featuring three identical screens in a round, provides a new dimension in public arena, totally different from the conventional flat-screen displays to date. Employing the patented technology, the three big screens real time synchronize with PC monitor, displaying video, graphics and/or texts simultaneously. Viewers, at any position around the DynaScan, can see the three identical life-like images, instead of confronting the single in one-way direction. This unique feature broadens the visibility of DynaScan as a brilliant media for advertising or information broadcasting, and etc.,

Patented flying LED

The DynaScan is equipped with thousands of bright LEDs. Each of it spins around a drum to create vivid image in a 360-degree panorama. Our proprietary driver technology are patented in USA, China, Japan, and Taiwan, etc,
